

GREENFIELD'S TURF, INC.

Simply the Best

Turf Specifications: **Enduro Dwarf Tall Fescue**

Enduro Dwarf Tall Fescue is our most popular sod and one that is best suitable for the Central Coast and Northern California Areas. Enduro is our new generation sod of the highest quality turf seed blends of 90% Dwarf Tall Fescue and 10% Bluegrass to give you better repair ability in the high traffic areas and a finer texture along with a good year around dark green color. Enduro Dwarf Tall Fescue is more Drought Tolerant and uses less water than the older varieties of Tall Fescue and is more disease resistant than ever before. Enduro will perform well in Heat and Cooler weather that we get in Northern California.

RECOMMENDED USAGE: residential, commercial, industrial, playgrounds, parks and athletic fields.

Performance Chart: Scale from 1 to 10 (10 is better)

| | |
|------------------------|---|
| Drought Tolerance: | 7 |
| Winter Color: | 9 |
| Heat Tolerance: | 8 |
| Moderate Wear Recovery | 7 |
| Disease Resistance: | 8 |
| Shade Tolerance: | 5 |

SOD COMPOSITION: Enduro Dwarf Tall Fescue is a mix of 90% of the highest Quality and Drought Tolerant Dwarf Tall Fescue seed and 10% of the highest Quality Kentucky Bluegrass seed and which are best suitable for Northern California's climate and soil types, **ENDURO DWARF** is grown by **GREENFIELDS TURF INC.**

DROUGHT TOLERANCE: One of Enduro's greatest qualities is its drought resistance. It has a deep and dense root system. (2 ½ ft. to 4 ft. is common). Because of this deep extensive root system there is more area to draw water from, in turn needing less water applied.

GREENFIELD'S TURF, INC.

Simply the Best

SHADE: Enduro Dwarf Tall Fescue prefers a sunny location, but will perform better in light shade situations than bluegrass or blue/rye combinations.

COLOR: Enduro Dwarf Tall Fescue maintains a deep rich green color throughout the year when properly cared for.

DISEASE: Enduro Dwarf Tall Fescue is highly resistant to most common diseases such as leaf spot, rust and fusarium. Has a good tolerance for summer heat and winter cold.

MAINTENANCE: a good complete fertilizer is required twice a year in the spring and fall. All other fertilizer applications may be made with straight Nitrogen. During the spring, winter and fall months you should be fertilizing every 4 to 6 weeks with ½ to 1 pound of actual Nitrogen applied per 1000 square feet. Do not fertilize during the hot summer months.

MOWING: Enduro Dwarf Tall Fescue should be mowed regularly with a rotary mower. Set mowing height to cut at 2" Never mow more than one-third of the top growth at any one mowing.

WATERING: Newly planted sod should be watered daily for the first 10 days to avoid drying out and to enable the rooting system to penetrate into the new soil. Once sod has been established, watering frequency may be reduced. Do to varying soil and climate conditions, it is difficult to recommend a watering schedule. Soaking the lawn 2 to 3 times a week generally is adequate in most summer weather situations. **Water in early morning hours only.**
